PROFILE

Computer Engineering student at Istanbul Arel University with hands-on experience in artificial intelligence, computer vision, full-stack web development, database systems, and network programming. I have developed academic and personal projects using Python, Java, C++, JavaScript, Node.js, PostgreSQL, and SQL. I also completed a 40-business-day internship in the Artificial Intelligence and Vision Systems team at Altınay Savunma Teknolojileri, where I applied my technical knowledge to real-world computer vision problems.

EDUCATION

ADILE MERMERCI ANATOLIAN HIGH SCHOOL

Sept. 2018 - June 2022

ISTANBUL AREL UNIVERSITY

Oct. 2022 - Present

Fourth-year Computer Engineering Student

EXPERIENCE

ALTINAY SAVUNMA TEKNOLOJİLERİ

Artificial Intelligence and Computer Vision Intern

Mar. 23, 2026 – June 24, 2026 | 40 Business Days | 40 Business Days

- Worked with the Artificial Intelligence and Vision Systems team on real-world computer vision applications.
 - Gained hands-on experience in dataset preparation, annotation, augmentation, model training, inference, and performance evaluation using Roboflow and OpenCV.
 - Worked with YOLO26, Roboflow models, and RF-DETR on object detection, classification, segmentation, keypoint detection, and pose estimation tasks.
 - Researched the compatibility and real-time deployment capabilities of Hailo, Raspberry Pi, and NVIDIA Jetson platforms.
-

PROJECTS

AgriFlow

Node.js, Express.js, PostgreSQL, JavaScript, JWT

Developed a full-stack farm management application for tracking fields, agricultural activities, harvest records, and yield performance. Implemented JWT authentication, password reset, Swagger API documentation, user-specific data access, and yield analytics.

Power Pong Game

HTML, CSS, JavaScript

Developed a two-player browser-based arcade game featuring a scoring system, power-ups, increasing ball speed, countdown mechanics, restart controls, and a game-over screen.

Smart Agriculture Monitoring and Control System

C++, TCP/IP, Socket Programming, IoT

Developed an IoT-based monitoring and control system using multiple sensors, a gateway architecture, TCP socket communication, and actuator commands.

Heart Disease Prediction and Analysis

Python, Machine Learning, Data Analysis

Compared Logistic Regression, Random Forest, and XGBoost models using BRFSS data, with a focus on class imbalance, recall, and model performance evaluation.

Grain Storage and Management System

SQL, Microsoft SQL Server, Database Design

Designed a relational database system for managing branches, silos, grain intake, inventory movements, quality tests, and sales operations.

Hotel Reservation System

Java

Developed a desktop hotel reservation system with visitor registration, room assignment, reservation management, and an administrative interface.

SKILLS

Programming Languages: Python, Java, C++, JavaScript, SQL

Web Development: HTML, CSS, Node.js, Express.js

Artificial Intelligence: Machine Learning, Computer Vision, OpenCV, YOLO26, RF-DETR, Roboflow

Database: PostgreSQL, Microsoft SQL Server, Database Design

Networking: TCP/IP, Socket Programming

Tools: Git, GitHub, Swagger, Visual Studio, VS Code
